series FX3.1

FX3.1.35

FX3.1.35M

The **series FX3.1** marks the MECHANICAL 3-ROLL ASYMMETRICAL PLATE ROLLING MACHINES with complete single pre-bending. The side roll has a straight up and down movement and the rotation of the rolls on these machines is applied to the lower and upper roll. Both the side roll and the drive rolls (upper and lower) can be motorized (version FX3.1.35M). The plate is pinched by the bottom roll, which is raised and lowered in a straight line by means of a dual-bearing device.

The easy use of these machines for making filters, small sized cones, and small diameter pipes make them an excellent compromise for quality and economic processing.

All versions are equipped for interchanging the UPPER ROLL with two standard diameters, allowing the production of pipes with very small diameters
